SUMMARY

Java Backend Developer with 1 year of experience in building RESTful APIs using Spring Boot, JPA, and MySQL. Hands-on with Redis, JWT, and Kafka for building scalable and secure backend systems.

EDUCATION

Manipal Institute of Technology, Manipal

Bachelor of Technology in Computer Science and Engineering

Graduated: 2022

GATE CSE Rank: 949

EXPERIENCE

Software Engineer

CGI

Aug 2022 – Aug 2023

Bangalore, Hyderabad

Internal License Management Tool (Spring Boot, JPA/Hibernate, MySQL, React)

- Worked on backend services managing **1000+ software licenses**, supporting procurement and renewal.
- Worked on migrating legacy license management features to modular REST APIs using Spring Boot and JPA.
- Integrated Redis caching to improve response time for frequently accessed license metadata.
- Enhanced authentication flow by adding OTP-based MFA using Redis and Spring Security.
- Contributed to building approval workflow logic and added automated email triggers for purchase requests.
- Optimized slow SQL queries during system migration, reducing DB call time by 20% for license summary reports.

Internal Budget and Vendor Request System (Spring Boot, MySQL, React)

- Contributed to migrating budget request workflows from legacy code to Spring Boot-based RESTful services.
- Wrote and refactored JPA queries to improve performance for approval and vendor modules.
- Implemented backend validations and role-based access control for budget requests.
- Worked on minor UI improvements using React, such as form validation and state handling.
- Added Log4j-based request logging for debugging and traceability in production.

Virgin Plus Canada (Testing, Accessibility)

- Worked with the accessibility team to identify and resolve over 100 WCAG compliance issues.
- Wrote and executed cross-browser and cross-device test cases to ensure UI consistency.
- Created ER diagrams and documented test scenarios for QA handoffs and audits.

PROJECTS

DNA Sequence Search Engine | *Spring Boot, PostgreSQL, Java, Spring Security, Multi-threading*

- Developed a system for storing and matching DNA patterns using hashing and similarity-based search.
- Implemented secure data handling, role-based authentication, and optimized search with indexing and threading.
- Designed a multi-threaded matching algorithm, improving DNA matching speed by 3x on large datasets.

SKILLS

Programming Languages: Java, JavaScript, C++, Python, HTML, CSS

Frameworks & Libraries: Spring Boot (Security, Web, Data JPA), React, Redux, Docker, JUnit, Mockito

Databases & Caching: MySQL, PostgreSQL, Redis (Caching, Rate Limiting), MongoDB

Tools & DevOps: Git, Postman, Maven, IntelliJ, VS Code, Debugging

Core CS Concepts: OOP, DSA, Multithreading, Operating Systems, Computer Networks, Linux, Windows

ACHIEVEMENTS

GATE CSE Rank: 949 (2022)

Solved 500+ DSA problems on LeetCode and HackerRank

Online Chess Rating: 2000+. Regularly compete on Chess.com and Lichess
